Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Applicant's arguments filed 1/8/2007 have been fully considered and are persuasive.

Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-24, 37-39, and 56-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Levanon et al (WO 01/096682) in view of Takahasi (6,737,212 or 6,806,019).

Levanon et al teaches a photoresist and an imageable element that contains the the composition. The photoresist composition contains the instantly claimed acetal polymer, and further teaches that other known resins such as phenolic resins, styrene-maleic anhydrides, and polyvinyl ketones may be added (page 13, lines 5-16). The reference further teaches that additional known additives may be included (see page 23), however the reference fails to specify dissolution accelerators. The Takahasi references teach that it is known to add dissolution accelerators to photoresist compositions (c 12, line 57 to c13, line27 of '212, c5, line55 to c6, line 20 of '019) These compounds include compounds falling within the scope of applicant's claimed polyhydric phenol compounds. It would have been obvious to one of ordinary skill in

the art to prepare the material of Levanon et al choosing to add the resins of either Takahashi reference with reasonable expectation of achieving a material having a high etch resistance.
